

Supply Chain

Web Catalogues

Create purchase requisitions based on a supplier's web catalogue.

- Remove the need to maintain an internal catalogue
- Ensure purchases are based on current supplier pricing
- Simplify requisition creation for users
- Maintain purchasing delegations and approval controls

Key features and benefits

Flexible catalogues, maintained by your supplier

Enable users to easily punch out to a supplier's website or a web marketplace, add items to their shopping cart and return the contents of the cart back into purchase requisition. Remove the need for customers to establish and maintain an internal catalogue for supplier/s.

Simplify the request-to-purchase process

Browse supplier websites with seamless integration to My Requisitions. Details of the supplier's products are returned from the web cart, reducing the amount of manual data entry required by users

Maintain purchasing control

Increase control with full visibility of the purchasing process. Items selected for purchase on the supplier's website are returned back to the user's requisition, with the request-to-purchase submitted for approval. The requisition must meet the required workflow route, financial delegation and approval processes before an order is sent to the supplier.

Seamless eProcurement solution

Combine with other modules in the Supply Chain eProcurement suite to automate the procure-to-pay process.
