Project Portfolio Management
Methodology Framework

Manage portfolio, program and project processes using industry accepted methodology frameworks.

Key features and benefits

- Meet PRINCE2, PMBOK, Management of Portfolios (MoP) and Managing Successful Programmes (MSP) best practice guidelines

- Use a stage-based approach to govern all methodology processes

- Improve transparency and simplify reporting processes

- Tailor a methodology framework to meet your specific organisational requirements

technologyone
Transforming business, making life simple

Manage against best-practice methodology frameworks

Implement your organisation's preferred methodology processes at the portfolio, program and project levels. The TechnologyOne methodology frameworks support global best practice portfolio, program and project level methodology frameworks and processes. This flexible framework can be tailored to your organisation's specific processes, stages, data capture, workflows and outputs if required.

Improve governance

Improve control over the way you manage your programs and projects by having standardised processes that must be followed across your organisation. Interactive monitoring tools make it easy for managers to ensure adherence to operational policies.

Streamline reporting and increase transparency

Simplify reporting and increase transparency with all processes managed via a single solution. Embedded Business Intelligence dashboards consolidate report metrics that are required across your portfolio, program and project tiers, with drill down capability as required.

Robust reporting capabilities enable you to create and distribute required reporting products to meet methodology reporting requirements. Reports can range from specific product outputs to periodic portfolio, program and project level performance management outputs and dashboards.

With all portfolio, program and project information in one database, reporting is streamlined and accessible in real-time to improve decision making and process compliance

Methodology Scope

Portfolio Management

- Portfolio Definition Cycle Management
- Portfolio Delivery Planning & Control Management
- Business Case Management
- Benefits Management
- Financial Management
- Risk Management
- Resource Management
- Organisational Government Management
