

Asset Management

Mobile Defects

Record asset defects in the field.

- Record defect information in the field, using mobile and GIS
- Record associated risks and suggested corrective actions in the field
- Intuitive user interface designed for ease of data capture

Key features and benefits

Structured data capture

With defined details of what information is to be captured, field workers can consistently collect the right information for different defect types.

Capture pictures and video

Pictures and videos can be taken and returned to the asset for further processing.

Pinpoint defect location

Use GIS to accurately locate the defect on a map, for ease of defect management.
