

HUMAN RESOURCE & PAYROLL SAFETY

Reduce workplace risk and improve employee safety by taking a proactive approach to the reporting and management of incidents and hazards

KEY FEATURES AND BENEFITS

- Use a single source of truth for managing workplace incidents and hazards
- Enable employees to report on incidents and hazards at the source on any web-enabled device
- Mitigate risk through integrated compliance training, licenses, certifications and inductions
- Keep stakeholders aware of incidents and hazards with automated alerts
- Empower managers to view and update incidents, hazards and associated investigations that affect their team
- Experience fast user uptake with the simple user interface

technologyone

Transforming business, making life simple

TECHNOLOGYONE SAFETY ENABLES YOU TO PROACTIVELY MANAGE RISK AND REPORTING ACROSS THE ENTIRE RISK MANAGEMENT SPECTRUM.

Easily capture information about incidents, hazards, risk assessments and safety teams. Ensure employees have completed the appropriate training and inductions and hold the required licences and certifications through this integrated HR and talent management solution.

Centralise information in a single system

TechnologyOne Safety is your central point for reporting, investigating, analysing and managing workplace incidents and risks. When recording incidents, select from a range of standard or custom incident types (eg chemical, electrical, property or vehicle damage). If the same incident is logged multiple times, entries are automatically collated to eliminate duplication.

Investigate and analyse workplace risk

Automatically link multiple incidents to individual hazards to identify areas of the workplace that require prompt risk management.

Keep managers informed with automated alerts

Ensure key stakeholders are immediately aware of major incidents or hazards with the configurable workflow engine. Provide managers with visibility of what risk management events have occurred in the past day or week at a glance, as well as any new hazards or incidents that have been reported.

Intuitive user interface

The simple, consumer-oriented interface requires minimal guidance for users. This ensures a fast uptake among even the most casual users in your organisation.

Part of an integrated Talent Management solution

Safety is a fully integrated component of TechnologyOne's Talent Management solution. This creates a single source of truth for your data and enables more informed decision-making.

ENABLE EMPLOYEES TO CAPTURE INFORMATION AT THE SOURCE

Increase the reporting of incidents and hazards by enabling the timely capture of information at the source. Employees can use any web-enabled device to log incidents and hazards they were affected by, or that they witnessed. They can also attach photos, witness statements and log reports on behalf of another person.
