

Supply Chain

Serial & Batch Tracking

Enable your inventory system to track items that have batch numbers or serial numbers.

- Achieve transparency through detailed stock enquiries
- Easily and immediately identify, monitor and track the movement of stock items

Key features and benefits

Powerful inventory tracking

Manage and track serialised and batched items through the complete lifecycle from procurement when goods are initially received, to issuing of stock, stock requisitions and sales orders, during stocktake. Track total on hand quantities for the product as well as individual items and specific costings, with Serial and Batch Tracking.

Sophisticated reporting

Produce serial, batch or lot number reports based on a variety of parameters, including expiry date range, production batch range or quantity selections.

Auto assign stock and batch numbers

Automatically assign unique stock numbers for each serialised product, such as computers or electrical appliances. Auto-assign Batch numbers to batched products such as safety equipment, with expiry dates recorded.
