

Training Course Overview

IntraMaps Administration

Duration

3 days

About This Course

This training course is designed to provide an introduction to all the working knowledge required to administer the IntraMaps Enterprise application. The majority of this course deals with the configuration of IntraMaps Enterprise using the IntraMaps ConfigManager application.

The course will also cover creating and manipulating the display of mapping data using the IntraMaps MapManager, some aspects of the setup in Internet Information Services Manager (IIS) and basic work on databases and SQL queries.

Who Should Attend?

This course will benefit new GIS Administrators, existing Administrators looking to reinforce existing skills and administrators that are interested in the new features in IntraMaps.

Course Objectives

The purpose of the course is to facilitate achieving the following objectives:

- Understand the IntraMaps architecture
- Configure and manage IntraMaps
