# Supply Chain Procedure Management.

# TechnologyOne has worked with leading hospitals to create a fit-for-purpose procedure management solution for the industry.

Procedure Management bridges the gap between the supply chain and patient administration systems by accurately recording and replenishing all items used in a procedure including imprest, stock, loan, or consignment items. These item and rebate details are automatically sent to the patient administration system for billing and funding claims.

As part of TechnologyOne's OneCare solution, Procedure Management combines with proven financials and supply chain management to ensure visibility, accuracy and efficiency, allowing you to focus on better health outcomes.

- Accurately record and automatically replenish all items used in procedures directly into your procurement system
- Ensure accurate patient billing and funding claims with integration of tracked items to your patient administration system
- Reduce manual entry and processing errors with scanning supported for all industry standard barcodes directly into your procurement system
- Identify issues and improve business processes with integrated reporting and analytics

### Auto replenishment

- Ensure relevant procedure items are accurately replenished and expensed
- Improve prediction of stock levels to reduce over-ordering
- Identify and investigate wastage and reduce it with updated business processes
- Better tracking of expiry dates and usable shelf life

### Accurately record & track items used in procedures

- Scanned items are linked to patients and procedures, and are easily searchable
- Accurately track and locate items to simplify recall processes
- Track items and procedures to provide data that can improve business processes when reported up to finance or procurement managers

### Integration with patient administration systems

- Accurately record all items used in a surgical procedure and automatically pass the item and rebate details to the patient administration system for billing
- Identify items that should not be billed with customisable reasons e.g. dropped or incorrectly opened
- Reduce transaction processing costs and risk of inaccurate billing or funding claims
- Automatically identify items which appear on the government approved prostheses list

### Scan items directly into your procurement system

- Streamline data capture with mobile device barcode scanning directly into your procurement system
- Support for all EAN, GS1 and Health Industry Bar Code (HIBC) formats
- Remove the need for manual entry into multiple systems
- Reduce errors and double handling

### Real-time view of inventory

- Improve data analysis and visibility to identify issues, and improve business processes
- Reduce theatre delays and cancellations caused by vital supplies being unavailable
- Analyse cost per procedure at an episode, specialty, hospital, or group level

### Surgeon preferences

- Manage individual surgeon preference for each procedure
- Record planned theatre layouts, patient positioning, preferred music and other key procedure notes
- Bulk update preferences via integrated import/export
- Allow cost comparisons for the same procedure for different surgeons
- Print surgery preparation picking list to assist with procedure preparation

### Single-view of suppliers

- Negotiate supplier prices
- Enable supplier analysis, contract pricing and purchase order consolidation
